

eRx Flu

ELECTRONIC MEDICARE FLU BILLING SOLUTIONS

eRx Flu

eRx Flu provides pharmacies with a solution to bill flu and pneumonia vaccinations to Medicare. Pharmacies are able to bill electronically using their existing pharmacy management system at point of service. This solution automates the Medicare billing process.

eRx Flu uses real-time edits at point of service and verifies patient eligibility.

eRx Network also offers customers the ability to verify patient eligibility using a laptop or PDA by accessing a web application. Users enter CHID, First Name, Last Name, Date Of Birth, and Gender information into the web tool.

Benefits

- Electronic billing decreases payment turnaround
- Real-time edits reduce billing errors and optimize reimbursement
- Real-time eligibility verification increases payment ratio
- Stand alone eligibility verification tool for ease of use

eRx Network returns in real-time patient eligibility status and whether or not the patient is enrolled in a Medicare HMO.

How It Works

Pharmacies enrolled in eRx Medicare DME replace the processor control number with USFLU. Each claim is processed at point of service using NCPDP

standard formats and response codes. Claims that pass editing are then routed to the appropriate Medicare Part B carrier for adjudication and payment.
